

# ML Model for titanic train Data Set

This was an assignment to further explore the use of Linear Regression on data sets

[Flick sama](#)

## ▸ Summaries of the models ran on wandb

☒ Run set 2 0 ⋮

This was a model where a data set was modified to create a legible model of the survivors and those who succumbed to the frigid waters that took the Titanic. Categorical data was mostly used to develop this model. Data like the "sex" of the passengers is categorical thus the binary digits "1" and "0" were assigned to create int values

Created with  on Weights & Biases.
